Lopcombe Corner Borehole — Highest Groundwater Levels

EA station E14150 · Chalk aquifer · borehole depth 54.30 m · datum 126.61 mAOD · records from 23 April 1963 · source: EA Hydrology API (retrieved 7 Sep 2026)

Recreated and updated 20 Oct 2026. This report rebuilds the September 2026 annual-maximum PDF. Logger-era winter peaks now come from the full daily EA record (downloaded 20 Oct 2026), which showed the earlier extractions had missed several later peaks. The all-time record is **102.01 mAOD on 13 Feb 2014**; 2023/24 reached **99.11 m** (12 Apr 2024) and 2025/26 **99.02 m** (27 Feb 2026).

Highest credible levels since 1963

Rank	Level (mAOD)	Date	Series
1	**102.01**	**13 Feb 2014**	**Logger (15-min) — record**
2	101.39	17 Dec 2000	Logger
3	101.17	21 Dec 2000	Dipped (same event)
4	100.75	8 Jan 2003	Logger
5	99.11	12 Apr 2024	Logger
6	99.02	27 Feb 2026	Logger
7	98.26	23 Feb 1995	Dipped
8	97.25	25 Feb 2020	Logger

- Seven winters have reached the 97 m Pitton flood threshold: 1994/95, 2000/01, 2002/03, 2013/14, 2019/20, 2023/24 and 2025/26 — four of them since 2013.
- Manual dips undersample sharp peaks once dipping became sparse (from about 2013); the 2014 dip maximum was only 94.90 m.
- **Data-quality flag:** a dip of 105.08 mAOD on 15 May 2025 is erroneous despite a ‘Good’ flag — neighbouring dips were 84.32 m (25 Nov 2024) and 80.39 m (9 Jun 2025), and the logger read about 82.8 m at that moment. It is excluded.

2021 has no dip reading. 2025 shows the cleaned value (next dip after the erroneous 105.08 m).

Logger era: dips vs 15-minute logger

Dips agree with the logger to within ±0.3 m while dipping was about weekly (2000–2012). From 2013 dips thinned to a few a year and miss the true peak. The last column is the highest daily logger reading from October to May of the winter ending that year, from the full EA record; the first-pass column shows the September 2026 extraction for comparison.
